STEP 1

Ensure power supply is turned off and remove any existing lamp fitting. Locate the supply cable and ensure is ready to be fitted to the connector block.

Mount the metal bracket securely in the ceiling with screws and wall plugs, appropriate for the ceiling of installation.
STEP 2

To determine the right suspension height for the lamp, pass the electrical cord through the strain relief of the metal bracket. When you have the desired suspension height of the lamp, tighten the plastic screw of the strain relief.
STEP 3

Connecting the wires:
Cut off the excess cord using a cable cutter so that minimum of 80 mm cord is left to reconnect to the cable connector. Peel back the outer cable using a cable stripper to expose 30 mm of the blue and brown inner cables. Strip the inner cable to expose 5 mm of wire. Connect the blue supply wire to the blue fixture wire. Connect the brown supply wire to the brown fixture wire. Connect the green supply wire to the green fixture wire.

STEP 4

Install the plastic canopy onto the metal bracket.

STEP 5

Bulb installation:
Unscrew the small glass diffuser installed in the bulb socket.
Insert the G9 bulb in the socket (when installing the bulb - make sure the bulb metal pins are not loose inside the bulb socket. Please also avoid touching the bulb with your fingers - use a dry cloth or a paper tissue).
Mount the glass diffuser back onto the bulb socket.

220-240V - 50 Hz
